Albatros de ceja negra (*Thalassarche melanophrys*). Ave pelágica, es decir, desarrolla la mayor parte de su vida en alta mar y solo regresa a tierra en periodo reproductivo. De gran envergadura alar, tiene un desempeño excepcional en planeo, permaneciendo mucho tiempo en vuelo sin posarse en agua o tierra.

Black-browed Albatross (*Thalassarche melanophrys*). Pelagic bird, that is, it develops most of its life in the high seas and only returns to land during the reproductive period. With a large wingspan, it has an exceptional gliding performance, staying in flight for a long time without landing on water or land.

Illustration: Charcoal, pastel, ink and mixed media on paper, 8.3" x 11.7"
About the Artist: Patricio Paretti is a freelance Chilean illustrator, designer and Cultural Affairs manager. Studied Applied Arts at University of Southwestern Louisiana, Design at Universidad de Valparaíso and has a Bachelor of Arts degree from Universidad de Chile. Currently living in Patagonia.
